Skin resurfacing, acne scars, surgical scars and striae

Your confidence is showing

The Frax 1550 treatment utilizes advanced technology for improving skin texture.<sup>1</sup>

Nordlys™

# Confidently look your best

Looking for an effective treatment to help reclaim your skin's youthful look, texture, and tone? Well, you are not alone. Skin resurfacing is among the most requested aesthetic procedures worldwide.

- ✔ Improve the appearance of acne scars and surgical scars
- ✔ Treat striae
- ✔ Improve skin texture

If you are looking for a solution for keeping your skin's appearance youthful, the Frax 1550 treatment might be right for you.

# Advanced technologies, enhanced appearance

The Frax 1550 nm laser rejuvenates skin by delivering very small, very controlled bursts of heat energy only to the area being treated.<sup>1</sup> This unique technology allows the pulse time and energy to be set independently to deliver controlled heat at the appropriate width and depth to meet individual needs.<sup>1</sup> The heat stimulates the production of collagen, which will resurface the skin over time. And because the laser is rolled across the skin, the treatment takes a short time, the surface of the skin is left intact, and healing and recovery are quick.

The SoftCool™ skin cooler helps reduce treatment discomfort, and the use of an anesthetic/numbing cream may be recommended. After this wears off, for a few hours you will feel as if you have a light sunburn.

# What you can expect

- 1 Prior to your Frax 1550 procedure, you and your healthcare provider will meet to discuss your treatment goals. Generally, the treatment procedure itself takes from 15 to 45 minutes, depending on the size of the area to be treated.
- 2 Typically, you will be offered a course of 3 treatments, but this will vary according to your needs. If you are darker-skinned, your healthcare provider may decide to offer a longer course of gentler treatments. Preprogrammed settings for different skin types ensures a correct energy output for your complexion.
- 3 It is important to avoid tanning salons and self-tanning products before and during the treatment period, and it is recommended to reduce sun exposure during this time and for 30 days after treatment. You will get maximum results if you use a normal moisturizing cream before and after treatment.
- 4 After treatment, you should avoid sun exposure for 30 days or use sun protection (minimum SPF 30) if sun exposure cannot be avoided. And be sure to let your healthcare provider know if you are prone to acne breakouts or cold sores.
- 5 Talk to your healthcare provider about what you can expect with your individual treatment.
